

Headphones

More than for owner.

I want to make headphones that may communicate together. I could not said a lot of my ideas there because someone may stole it very fast. Here small concept of headphones. All of my ideas we have before but I combine the best of them.

I want to create accessory that no one see before, there are magnet and wireless control that may connected different types to different targets. It needs to have AI that do some functions that can help people.

There are concept that I want to test by myself. Try to create small headphone with microphone at home. I think that design of headphones really strange and cool.

There are about 500 \$ for first prototype and about 100 000\$ to full project realization. Time to make it in real is 3 – 100 weeks.

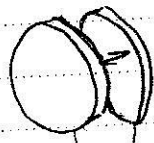

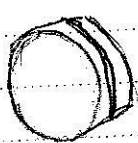

In result of calculating is ~3 weeks for first prototype and ~150 weeks of full project. Value and money may be similar 485 – 147 300 \$.

Microphone Technology

Chipset under skin

pressure

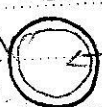

magnetic connection

α bass boosters

input of voice/sound
touch screen of settings

monitor

double touch
slide

long time touch
fast touch

Bluetooth - Wifi connection

If you want to use it for ear

3 ear connector for stability

Headphones

More than for you.

I want to make headphones that may communicate together it,s way to hear. I can't say some innovations in this concept because someone may stole this idea because it's really simple and I may haven't time to create it faster than someone read it.

I want to create accessory that no one sees before, there are magnet and wireless control that may connected different types to different targets.

I want to connect Small cloud hosting to using of headphones. They need to have AI that do some functions that can help people.

There is concept that I want to test by myself. Try to create small headphone with microphone at home and make it with magnet. I think that design of headphones really strange and cool.
