

Designer

It is my passion. I really like to make model of something. I often try to create new design anywhere because I agree rarely than I disagree. My interest in this coming from early childhood, when I try to make my own furniture, change that already have been and try to find similar in forms.

I find ~~any~~ first perfect in Ancient Greek buildings. I really like our city – Saint-Petersburg, because it is beautiful enough. I do not see city that more beautiful than Saint Petersburg.

In designer work I may said that I more ars worker. Cause of it, ars = art + science. I find attractive terminology of design. Nevertheless, in the most of all design there. I cannot said who I am really. Because we have not truth anywhere.

Thought I like make something new in vision of human. Play with colors, <sup>in</sup> make them sense. Create a power what we present. Change explaining, creating new. Make in real what imagine could true.

I like play with forms, colors, sense, materials, characteristics and sizes, like numbers and real language. He talk with me and I understand him. {Could say some crazy}

I may say so. However, I want to say that I have system and order in my entire project! My ideas controlled by my knowledge that I write during last 5 years in design and art. It is research base may be or empirical base from my life.

Therefore, after this description of my design I need to say what my resume for this job is. I work as freelance worker a lot of time. I help friends in graphical animation in videos. I make many graphic images. I use from 10 y.o. pixel and vector redactors from Adobe. In 15 y.o. I know all Adobe and do no less than one work.

I create pictures and edit photos. I start from static and come to action image-to-image movies. I make my first 500-image cartoon in 14 y.o. and like it. In most of all I create UI/UX design from 15 y.o. for different projects. Sometimes I do small outsource works for game or cartoon scenes. In part of 2016 year. I try a lot of different kind of work and really <sup>have</sup> make a lot of useful experience.

I create brochure<sup>s</sup> and advertising posters. Make it rare and often from real life clients, that know me like creative person.

I cannot count all what I create before 2019 year. However, I think there are more than 10000 images and 100 projects. They may be small but they be. <sup>more</sup>

After 2019 year. I have at moment of writing more than 478-528 images and pictures. [At moment of writing this] In the most of all I create 37 logotypes and 51 pattern. Start writing cartoon and UI/UX design. <sup>800</sup> <sup>67</sup>

My skills in this starts from fundamental absolute things. Like golden ratio, circles, Fibonacci and a lot of different magic laws like 52,16 from pyramid of Cheops.

I write all my thoughts and this really coming to big hint book.
