

Psychologist

Everyone -- psychologist. We have difference only in systematic knowledge base.

In addition, I may said that all psychologists have different base and their usage. The most of all use intuition for make ~~diagnosis~~ and very rarely someone have neuron machine that may diagnose some kind of illness.

My thought about all kinds of psychology. I think we know nothing at all. There are too difficult system that we may think differently than it is in real.

I create my own system, which I think will be more objective. Because I do not thought about non-material things. I try to read move and action. There are not a rather understand by words or thoughts. It is not to be true. I may said all what I want to said, but small reactions no one can control. For example, you comb a second phalanx of the forefinger there is some sense, more than you can understand. I cannot understand it at the moment ~~too~~, but this ~~chance~~ have description.

My idea of psychology have my own structure that I write last year every day. All my life I like to help people in relations. I may talk all night with girls to help them forgot about problems.

During all my life I like watch to the emotions and find in them sense. All of my photos contain it too. In addition, I want to make method, from AI that may control it automatically. We have too bad systems to separate photos and videos.

I cannot have resume for this job. Nevertheless, it is my passion in life like discipline. I really spend a lot of time for it. I help my friends in real like professional psychologist; I find in them psych type, write it, research and make decision. I use some of best Russian psychology textbooks, from Nemov, Averin, Maklakov. In addition, ~~I write Dale Carnegie, Sigismund Freud and Abraham Maslow~~ I write it without full interest because I cannot understand it in 2014-2017 years. Also I think that I think differently than them and want to make my researching for this fundamental theme.

I help my friends, which have small problems with human system. I make a decision for some kind of mind illness and try helping them with it. I try to help them with healing.

I help my friends in real like professional psychologist; I find in them psych type, write it, research and make decision. I use some of best Russian psychology textbooks, from Nemov, Averin, Maklakov. In addition. Sigismund Freud and Abraham Maslow. I write it without full interest because I cannot understand it in 2014-2017 years. Also I think that I think differently than them and want to make my researching for this fundamental theme.

I help my friends, which have small problems with neuron system. I make decision for some kind of mind illness and try helping them without medicine, only from mind. Because I do not like to use medicine in healing.

After all, of it my best practice experience is from psychosomatic hospital. Where I train my NLP skills from darknet on doctors from hospital. I try to do some magic tricks with them to control their attention. I do not drink medicine by it. I do not seat a lot of time with tests. I have twice portion for other people who would not to eat.

Also sometimes, I joke to them and try using it in my interest to see reaction. All of my research was simpler because they think that I am patient and they smarter than I am. In addition, they will be older and cannot see reason to train on them NLP. My thought, that only director may understand something. It is center Behtereva. I was there around 2 weeks and make many good and useful things during this period.
