

Motorcycle

New speed, new emotions.

This motorcycle full copy from nature and world physics. I really prefer something that have similarity with nature.

I copy this to minimum air resistance to make possibilities to maximum speed and maneuverability. I do not think about motor and engine because I have two thoughts about it. Firstly, it may be on renewable energy. Second, it may be on simple electricity. Third, that I imagine may be true and I believe it, transporting on magnetism.

I think about conceptual design that may be helpful and useful in most of all.

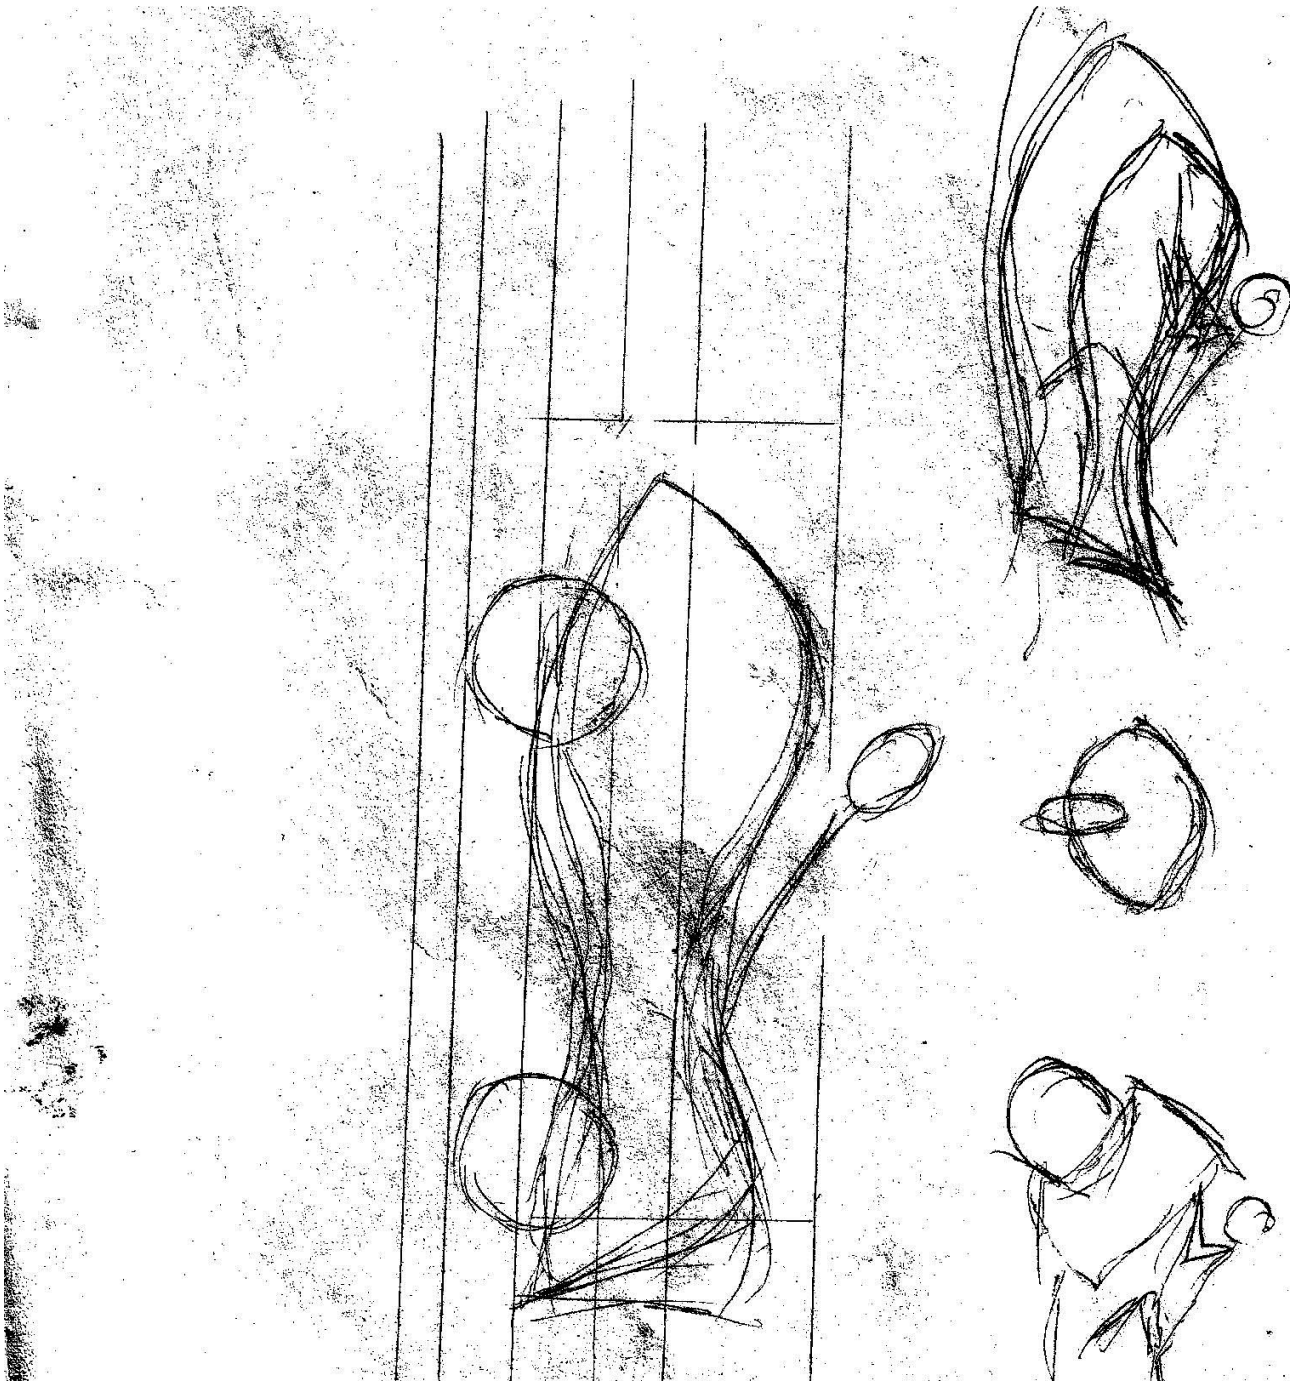

Now I want to compare different types of modern design and nature evolution.

My predictions for these projects. It may start after my automobile and work with AI. I think and predict, that cars come to automatic driving and most of racers comes to motorcycles.

I really think about safety of owner and about speed. I think it is the most valuable characteristics for this extremal type of driving.

There are big different and I cannot think about how much does it cost. It may be from 100 000 – 10 000 000\$; 1 to 5 years.

It is predictions for real starting manufactory, build technical way of creating and many failures in process of prototyping. It is only if we have experience with transport creating.

New speed, new emotions.

This motorcycle completely copy from nature and world physics. I really prefer something that have similarity with nature.

I copy this to minimum air resistance to make possibilities to maximum speed and maneuverability. I don't think about motor and engine because I have 2 thoughts about it. Firstly it's may be for usual type but only on renewable energy or it may be on simple electricity, like fast transporting from place to place by gravity.

I think about conceptual design, that may be helpful in reaction, that can be useful and no simple beauty.

Now I want to compare a lot of different types of modern design and nature evolution and rights.

My predictions for these projects. It's may be completely start after my automobile and work with AI. I think and predict, that cars come to automatic driving and most of racers comes to motorcycles.

I really think about safety of owner and about speed, it's I think the most valuable characteristics for this extremal type of driving.

There are may be really big different and I can't think about how much does it cost. But it's may be from 100 000 – 10 000 000\$; 1 to 5 years. It's predictions for real starting factory, build technical way of creating and a lot of failures in process of prototyping. It's only if we have experience with transport creating.
