

Watches

Fold-free magnet accessory.

Watches in my vision it is free-dress accessory that not wear only on hand. I want to upgrade digital in phones and watches communications. I think now we begin lose difference between watch and phone. There are accessory and device/gadget. I think it would not separate in nearest future.

My target for this is make some extraordinary design and make it free-comfortable in touch and using. I am trying to find way to create 3D image from watches like hologram and after long play with colors and lights. I found only one way to create interactive reality. It is creating small retractable cylinder that might open and close, it needs to be transparent.

Watches is not a big interest for me at all, I really like this type, but I do not think that it is important in nearest future. I may train and practice on magnet devices and interactive holograms. I think that it will be only part of big project.

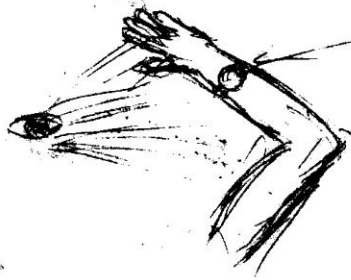

The cost of these concept may be 20 000 - 370 000 \$

Work will be from 15 to 76 weeks

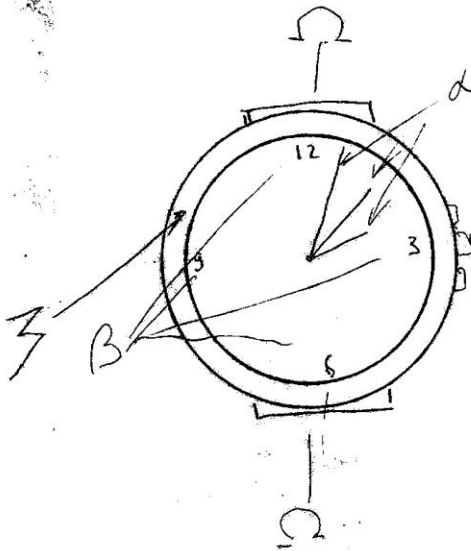

At the result of calculations 19 400 – 543 900 \$

Time – 14 – 112 weeks

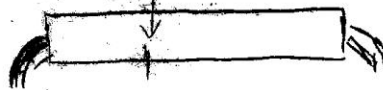

Concept of watch

panel with trace

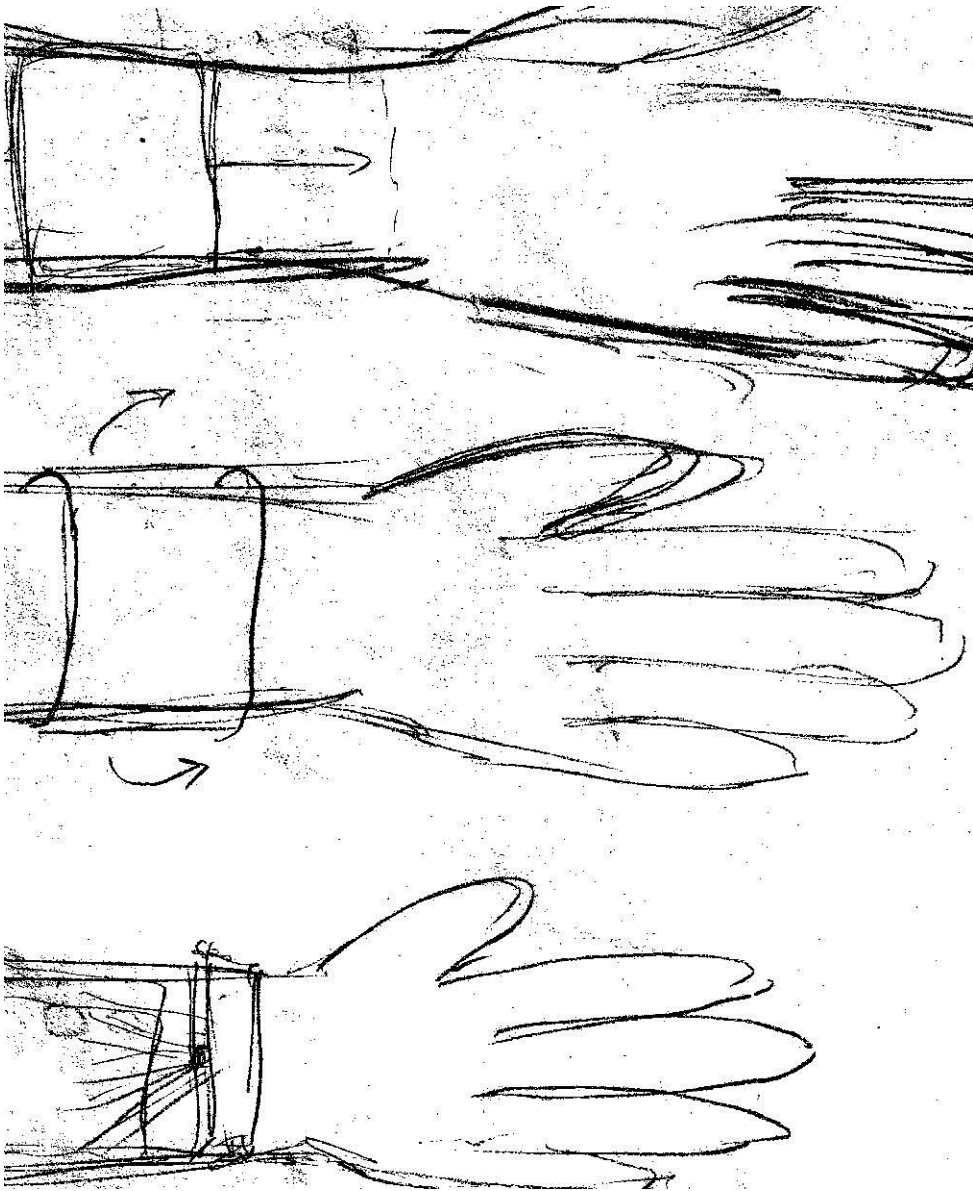

body of mechanism

buttons

α - arrows
 β - numbers
 γ - border
 Ω - belt

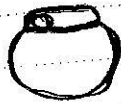

Watches

Smart accessory
with perfume

smell from technologies

— small fluid capacitor
to use info tech

you set frequency
of allotment of smell
and this is saddle

You don't need to think
about how you smells

accessory to neck
or wrist

may be in glasses

creating atmosphere
of you around
