

1.
Car

It's some kind of future.

I said after all, I can't show plan or scheme of this concept. Because someone may patent it faster than me. I may said about it.

It's new technologies, that give you possibilities to live in autonomic automobile. It's really smart car, where you can sleep when you drive to home or work. One of good possibilities of this car is sleeping where you come somewhere. Of course government need to create new law list for this and AI needs to be level 5. From car we may wait only good safety and safe construction that haven't possibilities to make bad for owner. This car like big capsule that safe you anyway.

I make design and small plan for technique equipment. Some of AI code and methods of analysis. I think for concept it's more than often needs.

I have an target clients, that starts from really rich people and after I want to make in real for everyone.

Average money for creating 1 prototype complete from several points.

Researching

Creating

Crash tests

Government regalements

Marketing

The most expensive in this concept of course mechanic and programming. Because for creating good product for market I need to complete all perfectly.

I can't said how much does it cost and how long it's with creations. But I said that I do it before 2044 is coming.

For my child thinking It's from 12 000 000 \$ to 96 000 000 and about from 93 – 475 weeks of work.

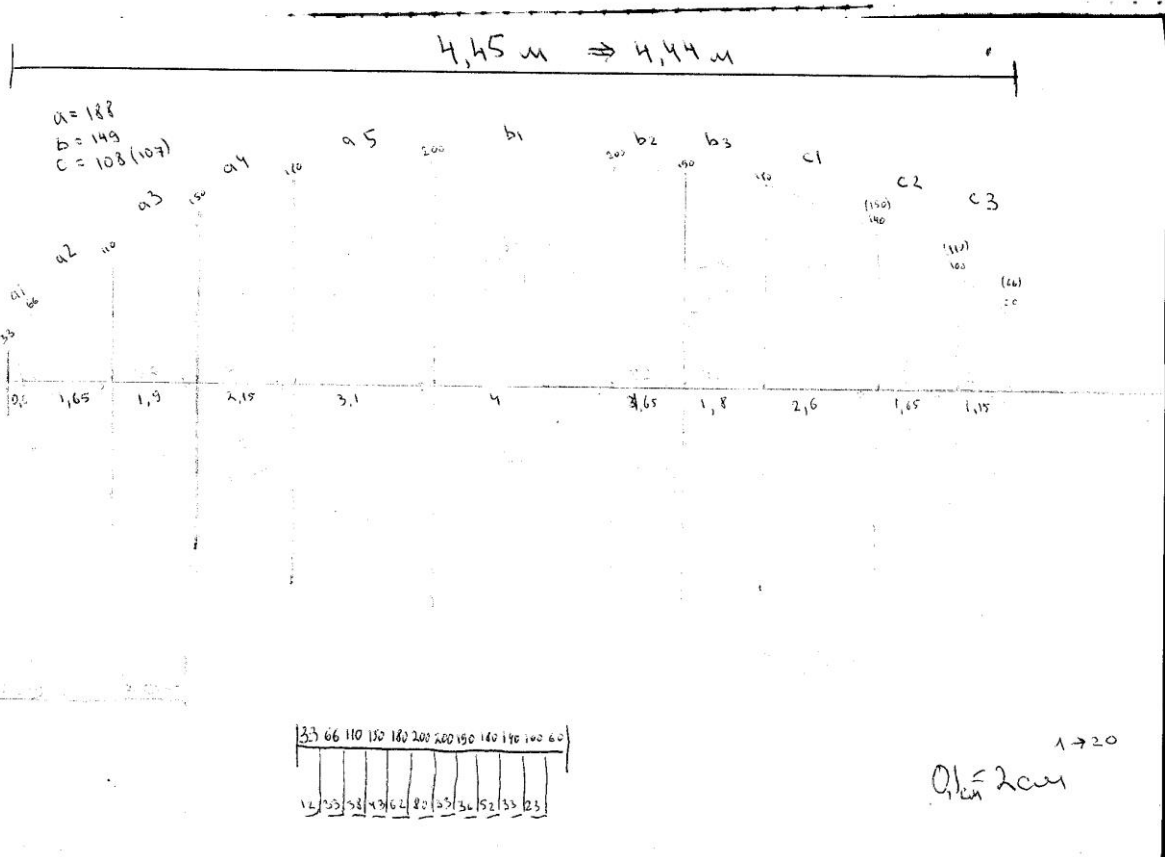

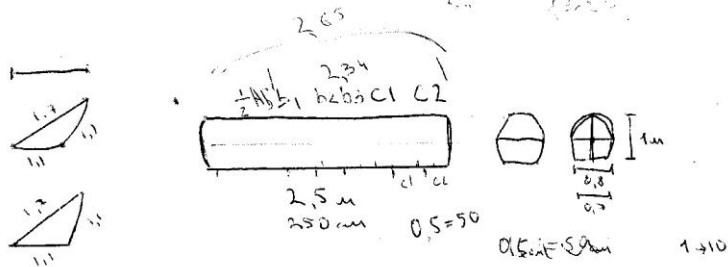

I think that I need to come this dream from different sides.

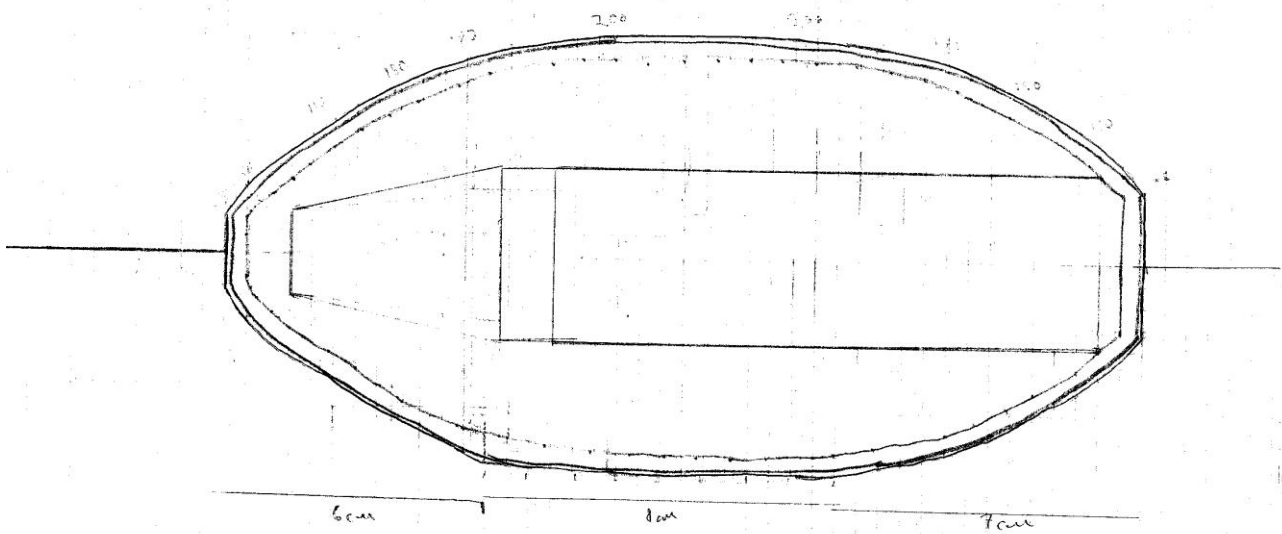

Firstly I may start doing AI for order and make from it money.

And how it will be in real all predictions may be wrong for 30-40 percentages and here we come. It will be from 40 000 000 \$ to 240 000 000 \$. and about 120,9 – 665 weeks of work.

The most expensive is researching to create something perfect. Artificial Intelligence, capsule, touch-screen panel and furniture.

If someone want to make money from it or investment. I will show all this concept and believe that we will be more that friends in way of creating this world changer.

21 420 cm

1 \Rightarrow 20

0,1 = 2cm
