

Train

Comfortable deus transport.

This train is future government transport, which have the main target to be more comfortable, smart and modern. Now I working for system of transporting I really think about small magnet rails that may be in tunnel. I think this will be high cost project, but I think that I may find some better ways to realize.

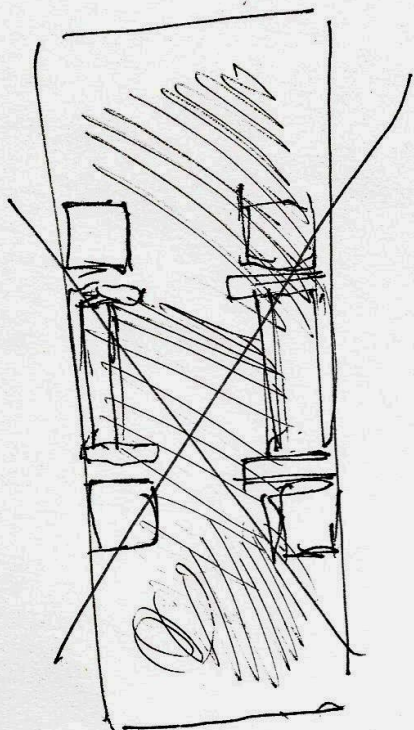

I like type of underground transporting. I do not like metro's environment when you come from one to one station.

I really want to make transport underground. Seat to wagon we need on ground and transport only underground.

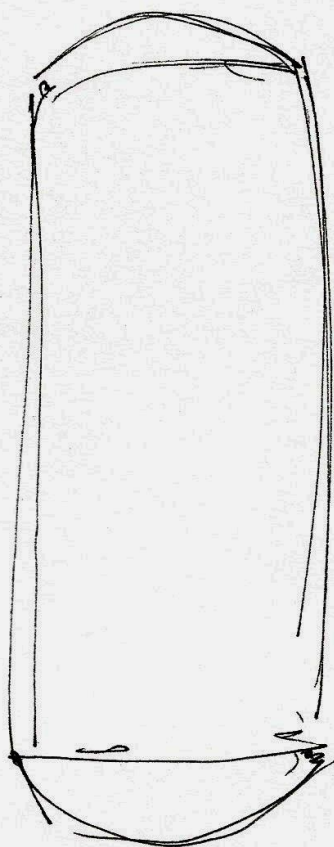

My thought about it - we need to remove all modes of transport except one.

It will be cheaper and more comfortable.

I do not think that we need a lot of society transporting types. I want to have one the best.

Comfortable deus transport.

This train is future designed transport, that have the main target to be more comfortable, smart and modern. Now I working for system of transporting I really think about small magnet rails that may be in tunnel. I think this is really high cost project, but I think that I may find some of much better way to realization.

I like type of underground transporting but I don't like metro for his own environment when you come from one to one station.

I really want to make transport underground but come to wagon we need on ground.

My thought about it, that we need to remove all types of different transport between one best in real.

It's cheaper and more comfortable.

I don't think that we need a lot of society transporting types. I want to have one the best.

It's hard to create fast but it really new stage of being when you re big city.

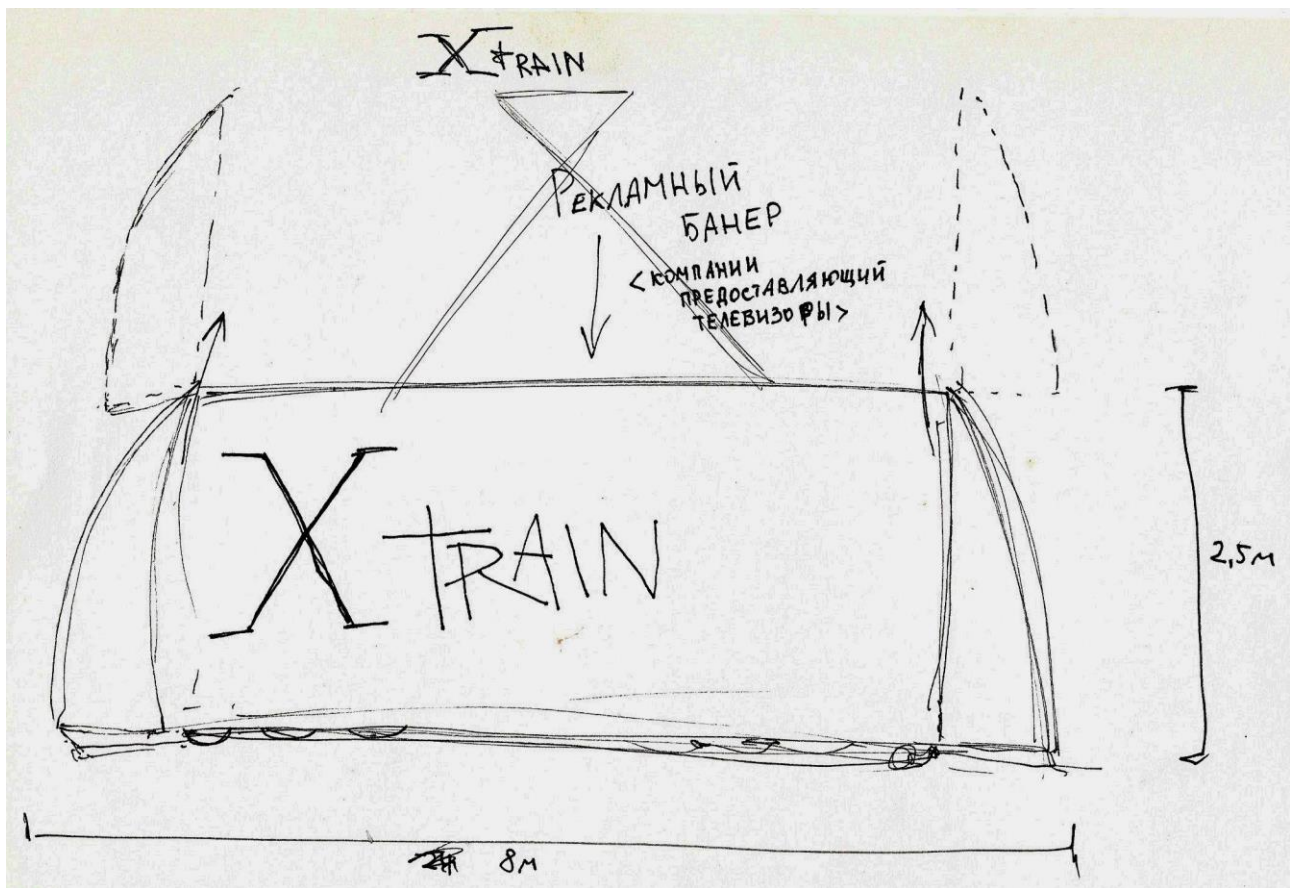

I want to make rounded forms and enter in the back side, exit in the front. Not a right or left side I want to make it like future transport that drives without driver. It's really hard to create but it's cheaper in the result.

I think this is the future and time by time we are coming for it. Now I can't think about it like commercial target but in future then I have money from other projects I want to make cities and countries better.

For my stupid calculating it may be from 100 000 000 - 1 000 000 000 \$ to create full environment for these transport. May be charging stations, control space, AI, prototype and manufacturing. Also we need to build roads and tunnels for these project. All of these needs to have government acceptance. The most part of these is safety because I don't think about critic situation that may be any way, I create an design and concept full of modern and comfort type. This project may be commercial because PR in design connected, that may show for other something great in products or said some message for society. There are a lot of different small aspects that I don't see. I need a lot of work about this concept at the moment.

My thought about time, may be from 5 to 23 year because it's only motivation needed.

At the result, if we think that all our predictions is failures in the start of think, because all people have bads. 130 000 000 – 1 400 000 000 \$ to 6,3 – 31,2 year.

It is hard to create fast but it will be new stage of being when it is - big city.

I want to make rounded forms and enter at back side, exit at front side. I want to make it like future transport that drives without driver. It will be really hard to create but it will be cheaper in the result.

I think this is the future and time by time we are coming for it. Now I could not think about it like commercial target but in future. Where I have money from other projects I want to make cities and countries better.

For my stupid calculating it may be from

100 000 000 - 1 000 000 000 \$ to create full environment for these transport.

May be charging stations, space control, AI, prototype and manufacturing.

We need to build roads and tunnels for these projects. All of these need to have government acceptance. The most part of these will be safety because I did not think about critic situation that may be any way.

I create design and concept full of modern and comfort type.

This project may be commercial because PR in design connected, that may show for other something great in products or show message for society.

I did not see many small aspects.

I need a lot of work about this concept at the moment.

My thought about time, may be from 5 to 23 year because the main part of this project – motivation.

Chance of human wrong.

Cost: 130 000 000 – 1 400 000 000 \$

Time: 6,3 – 31,2 year.
