

Psychology

Everything make sense.

I wish that people understand that psychologist – everyone. All what we see we try to analyze and all humans have thought about others. I do not know people who cannot describe someone. I think that the biggest difference between qualified psychologist/ psychotherapist and simple human. Simple human cannot describe how they understand it and describe their position. I may said that marketing managers work with psycho in first and only after – demand. All professions connect in psych types and good professionals may describe it.

I want to popularize psychology like something that may not to be definitely systematic. It may be more abstract because when we talk with humans we may see many gestures and action by body, that may said more than we can imagine. I think that world have not perfect psychologist but together can do in this way.

After all, of my researching I find a lot of combinatory with chance in psycho. There are goosebumps or comb. Sounds from stomach and other physical reaction for environment by thinking.

I may say about it at the moment no more than all of this have sense. I need to take over interest and train possibilities to talk with myself. It may be strange but it is the most powerful discipline. We need to understand what body language talk to us.

This language may be in all mammals. My thought about this position contain only environment researching, I cannot read a lot of about psychology because it have not constants.

This is not solo project. I want to make constant sense in all my concepts and projects. We have no truth anyway and all chance that we see [For example: fallen book from bookshelf that show for us word that we could not remember].

There are not a chance, there are combination of science, but I think about it more and more. I cannot describe it and I think that no one cannot do it. It is a chance that we call like god.

About chance one more sentence. I do not believe to something, that we cannot describe or understand, but it is and we describe it sometime when people will know more about environment all-around.

Psychology is the most powerful science that describe humans. I do not believe that humans may live without chance and there are may be psychology of chance. I really want to write book about it after, when I will be older and collect more self-researching about environment at all.

Psychology of motivation

If we connect our tip of fingers
this may show our concentration

10 fingers

maximum concentration
of the hands < all parts >

5 fingers

concentration of one part
sharp form

3 fingers

opened wrist
closed wrist

0 or 1

- 1 - thumb
- 2 - forefinger
- 3 - middle finger
- 4 - annular ring finger
- 5 - little finger

this is rounded

5 fingers with the using all hand
supremacy connected throughout the area

negative feedback

Medical Psychology
Negative feedback

Negative of course

Yin-Yang is combination of all muscles and their possibilities

α_1 forehead
 α_n eye/brows ears
 α_2 nose jaws
 α_n mouth jaw
 α_0 neck

We have 25 muscles on head

frontal muscles, latissimus, aponeurosis, occipital muscle
 circular muscle of eye, pterygoid muscle
 square muscle of lip, zygomatic muscle
 nasal eye muscle, circular muscle of mouth, square
 muscle, buccinator, triangle muscle, tip of
 chin muscle, transverse muscle of the chin
 tip of ear muscle, anterior auricular muscle, posterior
 auricular muscle, suboccipital muscle, neck

Technology is better than
 anything
 I see anything
 to fill them of simple strike

Psychology of motions

Motions: one of 3 types of
 social communications in
 real life

How we can perceive without
 " 1. Eyes
 2. Nose
 3. Ears
 4. tactilely

Brain logic
 meaning

So we can see motions and analyze them

First of all. We need to find
 Best Parts of motion communication

1 Hands — arms — wrist — fingers
 2 Legs — leg — feet — fingers
 3 Head
 4 body
 5 neck

Arm we can
 separate
 3 parts

Psychology

Everything make sense.

I wish that people understand ^{GO} that psychologist – everyone. All ~~what we see, we try to analyze~~ and all humans have thought about others. I don't know people who can't describe someone. I think that the biggest difference between qualified psychologist/ psychotherapist and simple human. Simple human can't describe how they understand it and describe their position. ~~I say and that marketing managers work with psycho in first and only after demand. There are a lot of professions that~~ combine different characteristic from other people and good professionals may describe and know something from simple statistic.

I want to popularize psychology like something that may not to be definitely systematic. It may be more abstract because when we talk with humans we may see a lot of gestures and movings by body, that may said more than we can imagine. I think that world haven't perfect psychologist but we can do in this way. ^{something} Understand our own body and mind.

After all of my researching I find a lot of combinatorics with chance in psycho. There are goosebumps or comb. Sounds from stomach and other physical reaction for environment by thinking.

I may said about it at the moment no more than all of this has meaning. I need to take over interest and train possibilities to talk with myself. It's may be strange but it's the most powerful discipline. We need to understand what body language talk to us.

This language may be in all ^{animals} ~~mammals~~. My thought about this position contain only environment researching, I can't read a lot of about psychology because it haven't constants. A lot of psychologist find more and more by themselves and can't it describe.

This is not a solo project I simple want to make constant sense in all my concepts and projects. We haven't truth anyway and all chance that we see from fallen book from bookshelf, that show for us word that we can't remember to meeting with old friend about whom we think. There are not a chance, there are combination of science, but I think about it more and more. I can't describe it and I think that no one can't do it. It's a chance, that we call like god.

About chance one more sentence. I don't believe to something, that we can't describe or understand, but it is and we describe it sometime when people will know more about environment all-around.

Psychology is the most powerful science that describe humans. I don't believe that humans may live without chance and there are may be psychology of chance. I really want to write book about it after, when I will be older and collect more self-researching about environment at all.
