

Bed

Destination – perfect sleep

I have a long-term task to make perfect bed for my own. I want to use it every day for sleeping that may collect my statistics.

There are many different ideas from simple capsule with forms and capsule of sensory deprivation. I do not know [might people sleep in some kind of liquid on practice]. I want to research it.

I separate all bed for different part: head, body, legs. I want to make it differently. Firstly, I want to make pillow that may collect information.

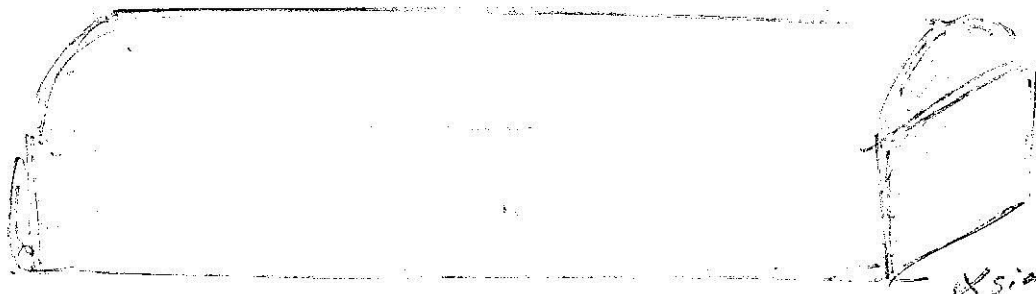

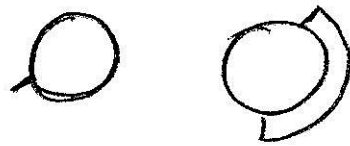

I know nothing helpful about this product but I want to do it. I see in this future and I will make it in real.

I have small plan of my capsule and I will try to realize it. Plan of construction; Sketch of design; methods of technique. I need to write technical task.

My prediction:

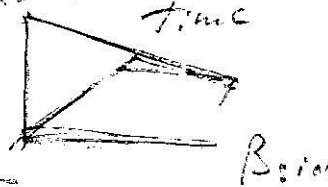

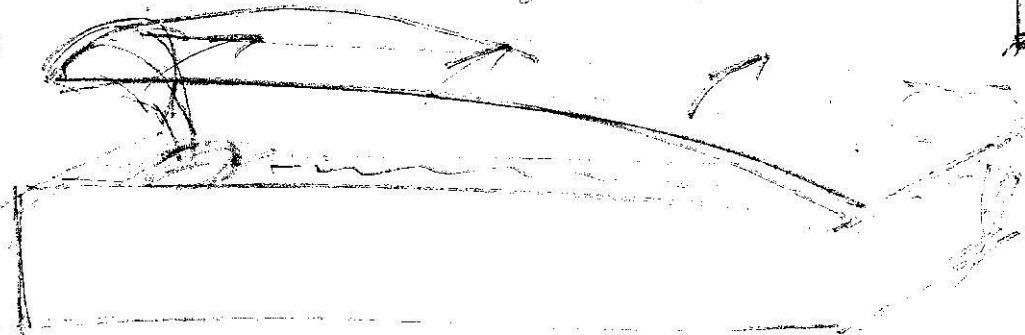

Cost: 80 000 – 540 000 \$

Time: 90-240 weeks.
