

## Monitor

### Circle form changing

We often see monitors in square forms that may show us not enough sometimes. Our eyes have circled or rounded view possibilities that combined and make oval shape. This is interesting and I think that main problem in this square forms is operation systems and combination with rounded corners. If I do my own computer and my own operation system, I want to make it better any way.

I want to see different kinds of monitors because sometimes we need something strange in design&psychology. There are big problem to make some different forms of monitor. I do not care about how much it costs. I see problem and want to change it anyway if it on my way.

I want to work with monitor's high quality and make may be something strange and new. I want to make materially convex image and it will be something new.

I really cannot predict this by cost. I know nothing in hard of work with monitors at the. It may cost from 500 000 to 5 000 000 \$, but I really cannot calculate it more accurately. Work can be from 60 – 140 weeks if we have good professionals in work with it.

### Circle form changing

We often see monitors in square forms that may show us not enough sometimes. Our eyes have circled or rounded view possibilities that combined together and make oval shape. This is really interesting and I think that main problem in this square forms is operation systems and combination with rounded corners. If I do my own computer and my own operation system, I want to make it better any way.

I want to see different kinds of monitors because sometimes we need something really strange in design and psychology. There is big problem to make some different forms of monitor. I don't care about how much does it may cost. Because I see problem and want to change it anyway if it in my interest.

I want to work with monitors high quality and make may be something strange and new. I want to make materially convex image and it's really something new.

I really can't predict this by cost because I know nothing in hard of work with monitors on moment of writing. It may cost from 500 000 to 5 000 000 \$, but I really can't calculate it more accurately. Work can be from 60 – 140 weeks if we have good professionals in work with it.

Real chance values are 475 000 – 73 500 000 \$. Work from 58 to 147 weeks. I can't have said it definitely, but I need to show my vision of this.
