Ship

Whale - human type.

It was small project for my own that I write on way. This is really inspiration concept that I don't want to make in real like business. I should create it in limit.
It might be after long-term business. When I might know more about engineering.

At this moment, I had only 3 different schemes of design.
I think that ship on water energy good for being in our world. It's may be combining solar and hydro energy. But in the most part of my design containing big blades into the middle of construction, that may create from water stream – energy and after it may be steam engine.
I want to make something really merging with ocean. When you cannot feel every wave because it will be like big organism.
In this ship I see only 3 floors.

Main task for this project is relaxing atmosphere that may give you possibility to abstract from other world for some time.

This concept expensive
I think because it will be new technologies, which we did not see before.
Small prototype cost may be variable from
300 000 – 1 800 000$
58 – 125 weeks
In the result of chance it may be
245 600 – 2 150 500 $
93,6 - 221 weeks

Ship

Whale modern type.

It's small project that I write on way and combine with whale. This is really inspiration concept that I don't want to make in real like business or some of factory product. I may create it in limit order for someone who want. It's will be after long term business leadership. When I may know more about engineering and transport creating.

At this moment I have only 3 different schemes of design. I make it few time than I have a curious. I think that ship on water energy really good for being in our world. It's may be combining solar and hydro energy. But in the most part of my design containing big blades into the middle of construction, that may create from water stream – energy.
I want to make something really merging with ocean. When you can feel every wave destabilized from center and control it by small parts. There are 3 floors and but I want to make it simpler than I create it at the moment. This floors may be separated to living, technical and rest.

Main task for this project is create relaxing atmosphere that may give you possibility to abstract from other world for some time.

This concept really expensive I think because it,s new technologies, that we don't use before. So at all the most valuable that the ships have 3 floors and comes to exclusive product. Small prototype cost may be variable from 80 000 – 450 000. 58 – 125 weeks. 77 600 – 661 500 $. 93,6 - 221 weeks.
